Issued August 1986

P26-85-52-C

Provisional Estimates of the Population of Counties: July 1, 1985

This report presents provisional estimates of the total population as of July 1, 1985, for 3,138 counties and county equivalents in the United States (including census areas in Alaska, parishes in Louisiana, the District of Columbia, and independent cities in Maryland, Missouri, Nevada, and Virginia). The series includes estimates for two counties established since the 1980 census—La Paz County, Arizona (separated from Yuma County in 1983) and Cibola County, New Mexico (separated from Valencia County in 1981). The 1980 populations shown for these four counties reflect their current boundaries. No separate estimate is shown for Kalawao County, Hawaii (1980 population of 144); it is included in Maui County.

Table 1 presents estimates of the population of counties and county equivalents in alphabetical order by State. The provisional estimates presented in this report will be superseded by revised July 1, 1985, county population estimates to be published on a State-by-State basis in Current Population Reports, Series P-26, later this year.

The 1980 census populations for States and counties shown in table 1 reflect corrections to the census counts through March 1, 1986.

The estimates presented in the table have been rounded to the nearest hundred without subsequent adjustment to the corresponding State totals which were independently rounded to the nearest thousand. Percentages are based on the unrounded numbers.

METHODOLOGY

The method used to develop the estimates presented here builds on the revised estimates for July 1, 1984, using a variation of the Administrative Records method to estimate the population change from July 1, 1984, to July 1, 1985. The Administrative Records method is a component procedure that uses Federal income tax data to measure the net intercounty migration of the household population under 65 years old, reported resident birth and death statistics to estimate net natural change, and data on Medicare enrollees to estimate the population 65 years old and over. Tax data for 1984 and 1985 are used to determine the number of persons whose county of residence changed during the period. A net migration rate is calculated and is applied to the household population under 65 years old. These estimates of migration are then combined with independent estimates of the population 65 years old and over, inmates of institutions, college students in dormitories, military personnel living in barracks, and the other components of population change (resident births and deaths, immigration from abroad, and net movement of military barracks personnel to the civilian population) to yield an overall estimate of the total population. A detailed description of the Administrative Records method is contained in Current Population Reports, Series P-26, No. 699.

For the 1984-85 estimate year, the net migration estimates are the same as will be used later this year in the revised Administrative Records method estimates for July 1, 1985. All other components for the year were replicated by repeating the last year of data used in the July 1, 1984, Administrative Records method estimates. The July 1, 1984, revised estimates series used as a base for the estimates was prepared by using or averaging methods described in individual State reports in Current Population Reports, Series P-26, No. 83-1-C to No. 83-50-C.

In eight States—California, Florida, Michigan, Missouri, New Jersey, North Carolina, Vermont, and Virginia—provisional July 1, 1985, county population estimates prepared by State agencies participating with the Bureau of the Census in the Federal-State Cooperative Program for Local Population Estimates (FSCPE) were averaged with the provisional 1985 Administrative Records method estimates. A variation of the Housing Unit method was used in Florida. The other seven States submitted provisional 1985 county population estimates using the Ratio-Correlation method (described in Current Population Reports, Series P-26, individual state reports). In addition, a second set of estimates based on the Drivers License Address Change Composite Migration Estimating method was used in California. The averaged estimates for these States are presented in this

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

READEX FICHE best copy available

report. The county estimates for all States were subsequently adjusted to the provisional July 1, 1985, State estimates released by the Bureau of the Census.

Incorporated into the population estimates are special censuses for counties taken by the Bureau of the Census or by the FSCPE agencies in Alaska and California. The census dates and populations are listed in table A.

Table A. Counties and County Equivalents with Special Censuses Since 1980

Census type[1]	County and State	Census date	Population
S	Kenai Peninsula Borough, AK	07-01-84	38,919
S	Ketchikan Gateway Borough, AK	07-01-83	12,712
S	Kodiak Island Borough, AK	07-01-82	12,714
F	La Paz County, AZ	11-05-85	13,883
F	Pima County, AZ	04-01-85	581,549
F	Pinal County, AZ[2]	07-14-85	90,798
F	Yuma County, AZ	11-06-85	85,672
S	Alpine County, CA	10-28-85	1,190
F	Archuleta County, CO	09-20-83	5,073
F	Mercer County, ND	07-18-83	13,933

[1] F – Federal census taken by Bureau of the Census; S – State census taken by State FSCPE agency.

[2] Excludes Kearney and Superior towns (1980 population 2,646 and 4,600, respectively).

A special census was taken for Maricopa County, Arizona on October 1, 1985, but a final count was not available at the time these estimates were prepared.

These are the first published county estimates to reflect an adjustment for increased emigration and an allowance for net immigration of undocumented aliens to the extent that they were counted in the 1980 census and are expected to be counted again in the 1990 census. These adjustments already have been incorporated in the national and State estimates released for 1985. The impact of the change as measured at the national level was to add 399,000 to the population over 5¼ years (76,000 a year). At the State level, California gained approximately 200,000; Texas, 64,000; Illinois, 28,000; New York, 27,000; and Florida, 16,000 over the period. In no other State was there an addition over 10,000. Although no specific disaggregation of the impact of the change at the county level has been developed, the greatest share of these State increases generally goes to metropolitan counties with large immigrant populations entering the United States (e.g., Los Angeles County, California, and Harris County, Texas). The background for making the adjustment for undocumented aliens is discussed in Current Population Reports, Series P-25, No. 985.

LIMITATIONS OF THE ESTIMATES

In Current Population Reports, Series P-26, No. 83-52-C, a comparison was made of the procedures introduced to develop the provisional July 1, 1983, county population estimates in that report with those that had been used prior to 1983. This comparison indicated that estimates produced by the new procedure differed by only 1 percent from those produced using the old procedure. Although no further evaluations have been conducted since that report, it is believed the estimates presented in this report may vary even less that the July 1, 1983, estimates for two reasons. First, the July 1, 1985, estimates are based on the revised July 1, 1984, county estimates rather than just the revised Administrative Records method estimates, as was the case with the provisional July 1, 1983, county estimates. Second, the averaging of provisional estimates based on independently derived procedures should help to reduce the differences in those eight States where such estimates were available. The new immigration/emigration adjustment should have almost no effect on these conclusions, with any significant impact restricted to a few areas.

Table 1. **Provisional Estimates of the Population of Counties: July 1, 1985**

[A dash "-" represents zero or rounds to zero. Includes corrections to 1980 census counts. Estimates are consistent with special censuses since 1980, see text]
